

Setting The Gold Standard

1460 Multiple Bladder Adapters

Goldenrod model 1460-LDX is a marked improvement over short length tire chucks or mechanical adapters.

- The 1460-LDX provides more gripping power. There are 6 to 9 rubber ledges that extend the length of the adapter on the 6" diameter model.

- Use in pairs or as a single length adapter—great for cantilevered applications, and no re-positioning of the cores is required!

- The 1460-LDX inherently centers the core due to the increased number of expanders around the circumference. We can even make this with the pneumatic Centering feature if required!

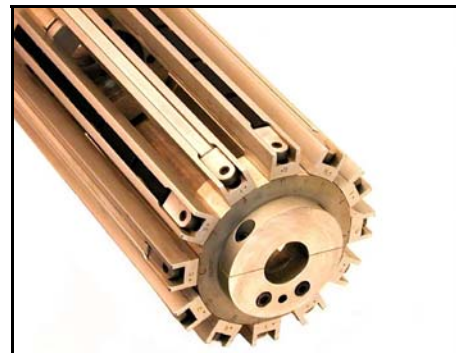

- Available in 3" up to 12" diameters with custom ID bores and in any length from 12" to 72".

- **CAN BE MADE IN OUR LIGHTWEIGHT DESIGN!!**

The models fit easily over expandable shafts or non-expanding mandrels. The 3" and 4" are attached with set screws; all larger sizes have split collars.

***STANDARD 6" AVAILABLE FROM STOCK**
***LARGE DIAMETER LIGHTWEIGHT SPYDER DESIGN (BELOW)**
