In-Line Shaft Puller Model 217

The Model 217 In-Line Shaft Puller has been designed for the extraction of an expanding shaft from a roll of wound paper, film, foil, or nonwoven material, and the re-insertion of the same shaft into a core.

The unit is composed of a base fitted with two longitudinal rails and a support rack, on which slides a carriage driven by a hydraulic motor. The carriage supports a vertical tower, on which an additional carriage slides on linear guides. This carriage is fitted with a device that grips the end of the shaft using a hydraulically-powered jack, which can lift the expanding arbor to a certain height along the line of the tower guides. Control of the various functions is performed using an electrical push-button panel.

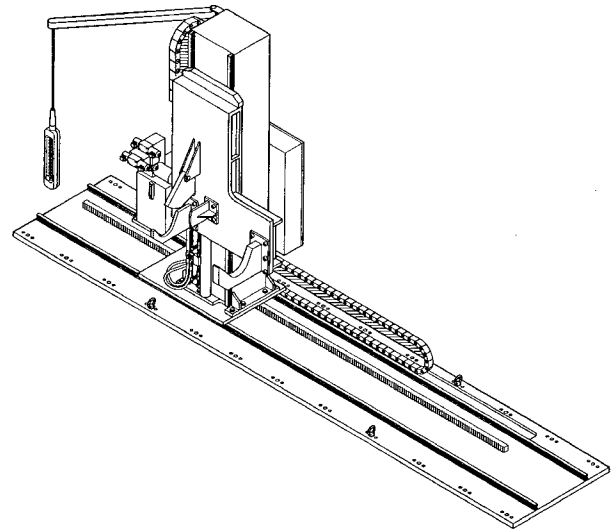

All Goldenrod/Svecom Shaft Pulling units carry a one-year warranty. Safety Fences not included. Installation-Operating-Maintenance manuals supplied with every unit.

Goldenrod offers a complete line of shafts, chucks, and shaft & roll handling equipment. Call today!
