PURE GOLD

REMOVABLE HANDLES FOR A 6" AIR SHAFT

(Patent Pending)

GOLDENROD is making an operator's life easier! Goldenrod introduces a new and innovative way to handle a 6" air shaft. **REMOVABLE HANDLES!**

The handles eliminate the awkward handling (hugging) and bending needed when handling a 6" shaft. The handles engage / dis-engage quickly from the fail-safe receptors embedded in the body of the shaft allowing for faster and safer changeovers.

These handles are designed to be used exclusively with Goldenrod's 6" Ultra-Light Weight Multi Bladder shaft, the industry's lightest 6" aluminum shaft.

For those of you still using tire chucks and are living with the roll bouncing and maintenance headaches - you can now use a dedicated 6" air shaft with ease.

Secure Grip & Release - Release button is placed in valley area and must be proactively depressed before handle disengages.

Once engaged - handle cannot be disengaged unless release button is fully depressed.
